

AIRpower Compressor

Air Brake System top-up Compressor. Designed to maintain air pressure in the vehicle air brake system above the release pressure.

AIRpower air system top-up compressor uses high quality components in a compact and easy to install format

Low in maintenance, it incorporates its own automatic draining moisture trap and filter, non-return valve, adjustable pressure switch, pressure gauge, and decompressor valve.

It also has a manual override on-off switch.

Suited for use with modern fire appliances with air-brake systems where fast activation time is essential, it will keep the brake system pressure above “release pressure” thus allowing for instant driving.

Also suitable for use in air suspension systems which have to be kept pressurised.

Fitted with a 6mm push fit connection and 8mm push fit adaptor.

Model	Voltage In	Current In	Compressor Output	Warranty	Weight Kg	Dimensions WxDxH
LUD-113-110	110V	4.8A	8.78 Bar/125psi	1 Year	7.90	240x200x212
LUD-113-230	230V	2.4A	8.78 Bar/125psi	1 Year	7.90	240x200x212
